Art Unit: 2653

1) The amendment filed 1/09/2006 is acknowledged. Claims 1-24 have been canceled. New claims 25-33 are currently been added.

Page 2

- 2) The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the following features must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.
- "the tracks including a first track, a second track and a third track, the first track, the second track and the third track being located such that the first track is sandwiched between the second track and the third track, the pit for tracking being recorded on the first track, a plurality of pits polarized in a positive direction and a plurality of pits polarized in a negative direction being alternately arranged on each of the second track and the third track, each of the plurality of pits on the second track and each of the plurality of pits on the third track being located so as to face each other, a polarization direction being different between each of the plurality of pits on the second track and each of the plurality of pits on the third track which face each other " (claims 28,30 and 32).

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application.

Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even

Art Unit: 2653

if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

28,30-33 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The original disclosure fails to specify the features of "the

Application/Control Number: 10/615,404 Page 4

Art Unit: 2653

tracks including a first track, a second track and a third track, the first track, the second track and the third track being located such that the first track is sandwiched between the second track and the third track, the pit for tracking being recorded on the first track, a plurality of pits polarized in a positive direction and a plurality of pits polarized in a negative direction being alternately arranged on each of the second track and the third track, each of the plurality of pits on the second track and each of the plurality of pits on the third track being located so as to face each other, a polarization direction being different between each of the plurality of pits on the second track and each of the plurality of pits on the third track which face each other "as now claimed in claims 28,30 and 32. These features are considered to be new matter.

- 4) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5) This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the

obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Page 5

6) Claims 26-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over KASANUKI et al (5,481,527).

KASANUKI et al discloses a dielectric recording medium, as claimed in claim 26, comprises a substrate (Fig.1, 5 and figure 5d, 51), an electrode disposed on the substrate (Fig.1, electrode layer 4), a dielectric material disposed on the electrode, wherein polarization directions of the dielectric material are set so as to be aligned in predetermined directions (Fig.2, ferroelectric layer 3, polarization direction 22), except to specifically show a pit for tracking in the control area. It would have been obvious to someone within the level of skill in the art at the time of the invention was made to have a tracking pit in the control area of KASANUKI et al's disk. The rationale is as follows:

Control area is old and widely used in the recording art, for example, control area can be located in sector header of the storage disk which includes tracking servo pits for controlling the tracking during recording or reproducing process (See US 6,965,545, HINO et

Art Unit: 2653

al's abstract; See US 6,510,130, HAYASHI et al's abstract, figure 3, tracking pits Ptrk at servo region (servo header); See US 5,914,920, YOKOGAWA's abstract and US 5,646,932, KURIBAYASHI et al's abstract and figure 5, tracking pit area ATR with tracking pits TP1, TP2 and TP3, etc.,). Therefore, one of ordinary skill in the art at the time of the invention was made would have been motivated to use a tracking pit in the control area of KASANUKI et al's ferroelectric recording medium for controlling the tracking as claimed.

Page 6

As to claim 27, the features of laying out the recording disk into recording area between an inner area and outer area are old and widely used in the recording art (See US 6,965,545, HINO et al's figure 1B, data area 101 between inner area and outer area).

As to claim 29, the features of dividing the recording area into a plurality of zones and tracking the pits are located in each of the plurality of zones are also old and well known in the disk recording art (See US 6,965,545, HINO et al's figure 1B, the tracking pits are recorded in every sector header region 101).

- 7) Claim 25 is allowed.
- 8) Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2653

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Page 7

9) The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(see form PTO-892 attached herein).

Applicant is reminded that in amending in response to a rejection of claims (if the rejection involves with any applicable arts) the patentable novelty <u>must be clearly shown</u> in view of the state of the art disclosed by the references cited and the objection made. Applicant must also show how the amendments avoid such references and objections. See 37 CFR § 1.111(c).

10) Any inquiry concerning this communication or earlier communications from the examiner should be directed to TAN Xuan DINH

Art Unit: 2653

whose telephone number is (571)727-7586. The examiner can normally be reached on MONDAY to FRIDAY from 8:00AM to 5:30PM.
